Modem Cradles

Modem cradles for Symbol Mobile Computers

Charge a handheld device while using it to keep up with email and access the Web from any phone line. The InVision Modem Charging Cradle provides an easy way to dial up a PC or connect to the Internet any time and provides the extra benefit of renewing battery power instead of using it. Anywhere access to email and other mission-critical data means users stay up-to-date and experience increased productivity. The Modem Charging Cradle is an ideal way to enhance the mobile computing experience and give users a reliable desktop remote access solution.

Easy, Convenient Remote Access to Essential Information

The Modem Charging Cradle enables data access over a standard phone line and charges the handheld simultaneously. The Modem Charging Cradle dials the phone number, makes a connection, and dutifully syncs data over the wire. Strengthen the capabilities of the handheld and Modem Charging Cradle by using third-party software to browse the Web, access POP3 email, or send faxes.

Many organizations are using handhelds to replace clipboards and paper for remote data gathering. Applications such as surveys, focus groups, training sessions, inventory management, and scientific studies are ideal for handheld data collection. The Modem Cradle provides a reliable, durable data connection to easily link and download data from handhelds to a central location.
